

Locking / Chamfers

Creating a Chamfer

- Twist the locking knob to lock the dog in place.

- If you are creating a top with a UJK parf guide system a small chamfer will be needed. Use either the UJK chamfer cutter or router.

- With the chamfer fitted the parf dog will be flush if using a UJK top.

- The parf super dog can also be inserted from beneath the work top to create a low profile dog.
